                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      searches of the complete sequence against a pertide database and the plant EST database at TIGR (http://www.tigr.org/tdb/tgi.shtml). Annotated genes are named to indicate the level of evidence for their annotation. Genes with similarity to other proteins are named after the database hits. Genes without significant peptide similarity but with EST similarity are named as unknown proteins. Genes without protein or EST similarity, that are predicted by more than two gene prediction programs over most of their length are annotated as hypothetical proteins. Genes encoding tRNAs are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           prediction programs including Fgenesh (http://www.softberry.com/), genscan and Genscan+ (Chris Burge, http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu/GENSCAN.http://CCR-081.mit.edu
